Availability: Aug. 2027 onwards
San Francisco Bay Area

EDUCATION

National University of Singapore - Bachelor of Computing in **Computer Science** *2024 - 2027*

Stanford University - Management Science & Engineering | **NUS Overseas College** Silicon Valley *2026*

EXPERIENCE

Piris Labs (YC W26) San Francisco Bay Area

Founding Engineer, LLM Infrastructure | Distributed Inference, sglang, vLLM, Rust, Go, AWS *Aug. 2026 - Present*

- Building the redefining layer for inference workloads.

ByteDance Singapore

Applied ML Orchestration Intern | k8s, PyTorch, Go, Training, Autoscaling, Scheduling *Apr. 2026 - Aug. 2026*

- Building ML infrastructure for **fault-tolerant autoscaling** and resource optimisation across **heterogeneous GPU/CPU clusters** on Exabyte-scale training data for TikTok's global Search, Ads, & Recommendation models.
- Designed & shipped a **stage-aware admission gate** for large-scale ML training autoscaling, replacing a legacy check that silently blocked scale-downs; diagnosed the fleet-wide utilization regression & **recovered up to +8 pts CPU utilization** across clusters, **saving USD$8-fig/yr** est under constant-workload (**2PB memory, 300K CPUs**).
- Built a **loss-aware layer** that detects & **corrects over-aggressive resource downscaling** using direct throughput & CPU-throttle signals instead of stage heuristics, calibrated on 64K production samples.
- Built a **conversational FaaS MCP** agent that turns intent into validated, approval-gated autoscaling config changes, protected with automated rollback, & resulting in 95% reduction in time to region-wide changes.

Software Engineering Intern (BytePlus Platform Engineering) | Go, Node.js, RAG, Next.JS *Jan. 2026 - Mar. 2026*

- Deployed features for byteplus.com's Seedream5.0 launch, driving conversions of **1k+ B2B clients** & **440k+ MAU**.
- Led 0→1 development of byteplus.com **RAG** search: deployed **Go-driven Firecrawlers** for **ETL data ingestion** of **5,000+ documentation pages**, integrated vector retrieval with SSE multimodal rendering for LLM responses.

IBM (Client Engineering) Singapore

Full Stack Developer Intern | Spring Boot, Node.js, AWS, SQL Server, CrowdStrike, React *Sep. 2025 - Dec. 2025*

- **Forward deployed** on-site to co-engineer **B2G** SG military personnel **RBAC** system with 65k+ DAU.
- Built **Lambda**-automated event & visitor retry management batch pipeline using **Node.js** workers, integrating FALCON & Sequelize for clearance, triggering notifications using **AWS SNS/SES/SQS**.

CloudJoi (Malaysia's #1 arts ticketing platform) - cloudjoi.com Kuala Lumpur, Malaysia

Software Engineering Intern | Laravel, React Native, Next.js *May. 2025 - Aug. 2025*

- Shipped **20+** features & hotfixes under C-Suite supervision for B2C platform, B2B dashboard, & mobile app.

PROJECTS

sgl-project OSS Contributions | *PyTorch, SGLang, HuggingFace, Speculative Decoding* *Apr. 2026 - Present*

- Engineered **opt-in FP8 quantised** (`float8_e4m3fn`) **KV cache pool** in mini-sglang #132 doubling cache capacity (verified **2.00x** on Qwen3) with **21.1% throughput** & **26.8% median ITL gains** at conc=20 on RTX 4060.
- Generalised spec-V1 hidden_state slicing across EAGLE/FROZEN_KV in SGLang #26217, **fixing silent token undercount** via per-request cumsum offsets
- Implemented **end-to-end standalone speculative decoding** (Leviathan/Chen 2023) in mini-sglang #134: `verify_drafts()` with parametrised tests, byte-equality validated vs HF `assisted_generation` on Qwen3-1.7B/0.6B.

TECHNICAL SKILLS

ML Systems: PyTorch, SGLang, FlashAttention, Quantisation, KV cache, speculative decode
Distributed & Infra: Kubernetes, Ray, Docker, heterogeneous GPU clusters, autoscaling, training orchestration
Languages: Python, Go, Rust, C++, C, TypeScript, Java, SQL, Bash
Cloud & Other: AWS, GCP, Git, Linux, NumPy, pandas, Next.js, React, Spring Boot, FastAPI, Matplotlib
